

Maths- L.O- I can create an analogue clock.

To start off the week, I would like you to have a go at making your own analogue clock! You can do this using anything from around the house: You could use a hula hoop and chalk in the garden, Lego bricks, paper plates, be creative! If not, I have attached a template to the class webpage to create your own if you like, or you can draw your own! Can you create some times on your clock using the hour and minute hands? Can you tell an adult the time you have created? Remember, the minutes on an analogue go up in 5 minute intervals! If you have a younger sibling, can you help them to read the time they have created and explain why? Are there different ways of saying the time you have created? For example: 8.55 or 5 minutes to 9?
