

Sycamore Class Knowledge Organiser Summer 1: Fate vs Free will

Vocabulary Dozen

Fate- An ending or outcome that had to happen because of this power of destiny

Free Will- A voluntary choice or decision

Destiny- Events which have happened or must happen to someone because of fate or luck.

Country- A land controlled by a single government.

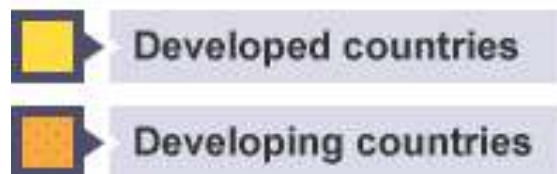

Economy: The way that a country organizes its use of money, goods, and trade

Government- a group of people that have the power to rule in a territory, according to the law.

LEDC- Less economically developed country- A low-income or economically poorer country

MEDC- More economically developed

More Economically Developed Countries (MEDCs)	Less Economically Developed Countries (LEDCs)
Richer countries	Poorer countries
North	South
The USA, European countries, Australia and New Zealand	India, China, Mexico, Brazil and All the African countries

What are developing and developed countries?

Development means almost the same as wealth.

A developed country (MEDC) is a rich country.

A developing country (LEDC) is a poor country. Development is often taken to mean the wealth of a country.

What is poverty?

Poverty means not having enough money for basic needs such as food, drinking water, shelter, or toiletries. Many people in different countries live in poverty, especially in developing areas of Africa, Latin America, the Caribbean and some parts of Asia.

country. A high-income or economically richer country.

GM Foods- Foods whose genetic code (DNA) has been changed to improve the way it grows, thrives, looks or tastes

Developed country- a country that has more businesses and infrastructures (roads, airports, electricity, etc) than a developing country.

Developing country- A country with a low standard of living

Poverty- a lack of, or an insufficient amount of, the three primary physical needs—food, clothing, and shelter

Top 10 genetically modified foods

Are natural disasters increased due to human actions?

With increasing global surface temperatures, the possibility of more droughts and increased intensity of storms will likely occur. As more water vapour is evaporated into the atmosphere, it becomes fuel for more powerful storms to develop

Genetically modified food

This involves farmers using seeds which have been altered by scientific techniques. In the past plants were improved by breeding them with better plants. This allowed farmers to grow strong plants which gave large amounts of crops to sell.

Genes carry the instructions for all the characteristics that a living thing inherits. Genetic modification allows us to produce plants, animals and micro-organisms with specific qualities.
